SUMMARY

Information Systems graduate (University of Haifa, August 2026) looking for a NOC, help desk, or junior system administration role. Years of hands-on experience building and repairing PCs from components, doing clean Windows installs, partitioning and formatting disks, and running Linux virtual machines on a Windows host. Working TCP/IP knowledge from coursework and project work, including debugging cellular connectivity on hardware I built. Studying for AWS Cloud Practitioner, exam scheduled for 2026.

TECHNICAL SKILLS

- **Hardware:** Building, upgrading, and repairing desktop PCs from components (years of hands-on personal experience); Raspberry Pi 4 and Pi Zero setup, peripherals, and camera modules
- **OS Deployment & Maintenance:** Windows clean installs, disk partitioning and formatting, driver setup; Linux (Raspberry Pi OS / Debian); Bash scripting
- **Virtualization:** Running Linux virtual machines on a Windows host for development and testing
- **Remote Access:** SSH into headless Raspberry Pi devices
- **Networking:** TCP/IP fundamentals, USB cellular modem setup, file transfer over local Wi-Fi, connectivity troubleshooting (Computer Networks coursework and project work)
- **Cloud & Tools:** AWS Cloud Practitioner (in progress), Git/GitHub, Python, SQL
- **Languages:** Arabic (native), English (fluent), Hebrew (proficient), German (B1)

PRACTICAL EXPERIENCE

INFORMAL IT & HARDWARE SUPPORT – FAMILY, FRIENDS, AND NEIGHBOURS | *ongoing, unpaid*

- Regularly build, upgrade, and repair desktop PCs for people around me: diagnosing hardware faults, sourcing and swapping components, and testing the result
- Handle the software side of the same jobs – clean Windows installs, disk partitioning and formatting, driver setup, and tracking down performance and connectivity problems
- Explain the fix in plain language afterwards, usually to people with no technical background

HANDS-ON PROJECTS

IN-CAR CHILD DETECTION & ALERT SYSTEM (Senior Project – Awarded Excellent) | *Raspberry Pi 4, Linux, cellular, Python*

- Built a device that detects when a child is left alone in a car and sends an alert to the parent's phone
- Set up and ran the full Linux environment on a Raspberry Pi 4: OS install, camera and USB peripherals, and keeping the detection service running continuously
- Added a USB SIM module so alerts go out over cellular with no Wi-Fi available, then traced and fixed connectivity failures across both the hardware and the software side
- Wrote the detection logic in Python (MediaPipe, OpenCV) and built the mobile app that receives the alerts

OFFLINEOFFICE – LOCAL-FIRST FILE & DOCUMENT TOOLKIT | *Python, Flask, PyScript/Pyodide, Whisper, OCR*

- Built a toolkit of around 20 utilities that runs entirely on the user's own machine – PDF editing and redaction, offline OCR, audio transcription, image processing – with no data sent to any server
- Built Local Drop, a QR-based transfer that moves files between a PC and a phone over the local Wi-Fi network with no cloud service in between, plus a one-click QR for sharing Wi-Fi credentials
- Handled the setup problems that come with local tooling: optional dependencies pulled in only when a tool is used, and ffmpeg downloaded automatically the first time it is needed

AKI SENTINEL – CLINICAL SCREENING WEB APP | *Python (Flask), SQLite, JavaScript*

- Built a web app that screens ~39,000 ICU patient records and flags high-risk patients for clinical staff
- Cut dashboard load time from ~48 seconds to milliseconds by precomputing results into a cached database table and moving paging, filtering, and sorting server-side across 4.2 million records
- Added role-based logins, patient assignments, and notifications so several users can work in the same system

EDUCATION & CERTIFICATIONS

B.Sc. in Information Systems, University of Haifa August 2022 – August 2026

- Awarded "Excellent Senior Project", B.Sc. Information Systems, 2026
- Relevant Coursework: Computer Networks, Database Systems, Software Engineering & QA, Data Structures & Algorithms, OOP, Machine Learning
- AWS Cloud Practitioner (in progress) – certification exam scheduled for 2026
